

To whom it may concern, If only the local radio stations would report the traffic, and weather conditions as well as XM, in a manner we can understand. I would listen to them. Some states are implementing a "No Distraction" law. This means you could recieve a ticket if caught fiddling with the radio, trying to get information about the poor driver, who had a wreck fiddling with their radio, who was trying to find out about the the traffic.

As a truck driver, locals use names for their freeways, instead of the number system. I.E. 'Dan Ryan' instead of I-55. around chicago area.

We have a way of planning our routes earlier, and not have to wait for a report on the "2's". or 1/2 hr.

This is a paid service we want. We don't want a lot of commercials filling up the airwaves.

I'm against HR-4026!
